Case Study

> An e-commerce company wants to develop a new order management system.

Students decide which data structure should be used.

Business Requirement	Appropriate Data Structure
Customer ID lookup	Hash Table
Order processing	Queue
Undo operation	Stack
Organization structure	Tree
Social/business relationships	Graph
Sequential sales records	List/Array

Main Question

> **Why did you choose this data structure?**

The student is expected not only to provide the correct answer but also to **justify their technical decision**.
