Topics

- Review of fundamental data structures
- Algorithm selection
- Performance analysis
- Data structure selection
- Business problem modeling
- Project presentations

Final Project

Smart Business Process Management System

Students develop a small-scale Python application that uses **at least three different data structures**.

Example:

```
         BUSINESS PROCESS SYSTEM
                   |
       +-----------+-----------+
       |           |           |
     Queue       Stack     Hash Table
       |           |           |
  Requests    History    Customers
```

Advanced students may additionally use:

- Trees
- Graphs
- Searching
- Sorting
